

WETTOMATE

PRODUCT DETAILS.

KEMAGRO'S WETTOMATE is a performance maximizer for increasing crop yields and aids in irrigation. It works as Sticker-Spreader-Rainfastner-Activator.

FEATURES

- Because Wettomate reduces surface tension and makes water wetter, it also helps water (and whatever pesticide it's carrying) penetrate/spread the surface faster and more evenly.
- Helps the pesticides spread better and hence gives better disease control.
- By making water wetter, Wettomate helps water penetrate these surfaces more easily and get on with its intended job. Because of the faster penetration and spreading , there is less run of less wasted water.
- Helps keep pesticides in suspension. The pesticide often may not mix well with water and separates rather quickly. When Wettomate is added to the pesticide solution according to the directions, it helps keep pesticides dispersed so that separation problems are greatly reduced or eliminated entirely.
- Wettomate is made with a unique, non- corrosive formula to protect metal pumps, tanks, and other metal equipment from the dangers of rust and corrosion.
- Because of its ability to help keep pesticides in solution, Wettomate helps keep equipment clean and prevents clogging of nozzles, resulting in less down time for your machinery, fewer mechanical worries and easier machine maintenance.
- Wettomate contains low foaming surfactant which is both non-ionic (having no electrical charge) and biodegradable (able to be broken into simpler compounds by natural biological action).
- Wettomate is a Performance Maximizer that offers farmers an excellent opportunity to increase crop yields.

“Backed by Independent results conducted in India.”

Benefits:

Kemagro's Wettomate extends the efficiency of pesticides, herbicides, and fungicides on crops and acts as an activator, helping increase the activity of these agents. It helps in reducing evaporation and runoff and the surface tension of water. Its low-foaming surfactants reduce the surface tension of water, helping the water (and whatever pesticide it is carrying) spread more evenly and penetrate the leaf surface faster. This faster and more even penetration minimizes the use of pesticides, herbicides, and fungicides and helps save money. Its non-corrosive formula protects pumps, tanks, and other metal equipment from rusting and clogging.

- Wettomate can be applied with Insecticides, Fungicides, Herbicides as well as Foliar Fertilizers.
- Wettomate can be used on all crops including plantations, vegetables etc.
- It has unique property of rain fastness for its use in high rainfall area.
- It enhances dispersion of Wettable Powder.
- Preventive as well as Curative Action.
- It reduces spray drift.

How To Use

You can use Wettomate with certain pesticide and fertilizer mixtures, thus providing more uniform distribution and saving time by allowing you to do two or more jobs with one trip over the field.

- For use with Insecticides / Fungicides:

Follow the manufacturer's instructions and add enough water to the spray tank. Turn on the agitator or recirculating pump.

Add 5ml of Wettomate per 15l of spray solution and allow them to mix thoroughly. Add the insecticide/fungicide as per the manufacturer's instructions.

- For use with Herbicides:

Follow the manufacturer's instructions and add enough water to the spray tank. Turn on the agitator or recirculating pump.

Add 15 ml of Wettomate per 15l of water and allow to mix thoroughly. Add the herbicide as per the manufacturer's instructions.
