

VAN NOMATE STICKY TRAPS

Product Overview

Van NoMate sticky traps are most effective pest management tools in the hands of the modern, knowledgeable tool for progressive farmers. There is no requirements of electricity, no pesticides or chemicals, very easy to install and need no maintenance. It is very effective against all sucking pests like whitefly, aphids, jassids, thrips, hoppers.

Product Target

Yellow / blue sticky traps are used for sucking pests like White flies, Thrips, Mites, Aphids, Leaf miners, Hoppers, Jassids etc.

Product Speciality

NoMate pheromone is premium quality traps, non-poisonous and weatherproof.

The glue can withstand rain and does not dry.

Highly attractive to insect pests, less effect on pollinating insect

Product Advantages

Ideal for early detection of pests. IPM / NPM / Organic compatible.

To plan insecticide applications according to the number of pests.

Also, to calculate the insect population density and their yearly population trends.

Eco-friendly, economical and ease of installation, less maintenance.

Well suited for organic farming. Helps in reducing conventional pesticide activity.

Method of Application and Dosage

Start using the traps from early stage of the crop, before the pests infect the crop.

Use 24-40 sticky traps per acre. If adult pests are present on the crop they should be disturbed by tapping the plants. Once they fly out, will be captured by the traps, particularly white flies.

Suspend the traps just above (10 to 14 cm) the plants. Remove the protective cover paper from the trap. The Traps should be placed facing East-West direction.

The traps will remain sticky & attractive for several months. They should be changed sooner if more than 70% of the surface is covered with insects or dust.

Monitor the traps every week and check the density of pest. Take appropriate steps to control the pest.

Trap them before they trap your profit!!!
